Excerpt: . . . 11 icy accommodation to date has significantly raised measures of the real Federal funds rate, but by most measures, it remains fairly low. The evidence broadly supports the view that economic fundamentals have steadied. Consumer spending has been well maintained over recent months and buoyed by continued growth in disposable personal income, gains in net worth, and the accommodative conditions in credit markets. Households have recorded a modest improvement in their financial position over this period, to the betterment of many indicators of credit quality. The sizable gains in consumer spending of recent years have been accompanied by a drop in the personal savings rate to an average of only 1 percent over 2004, a very low figure relative to the nearly 7-percent rate averaged over the previous 3 decades. Among the factors contributing to the strength of spending and the decline in saving have been the developments in housing markets and home finance that have spurred rising household wealth and allowed greater access to that wealth. The rapid rise in home prices over the past several years has provided households with considerable capital gains. Moreover, a significant increase in the rate of single-family home turnover has meant that many consumers have been able to realize gains from the sale of their homes. To be sure, such capital gains, largely realized through an increase in mortgage debt on the home, do not increase the pool of national savings available to finance new...
