

## Light-Ion Charge-Exchange Applied to Stellar Electron-Capture Studies

Filesize: 6.73 MB

### ***Reviews***

*This ebook is definitely worth buying. It is definitely basic but excitement within the fifty percent in the ebook. Its been designed in an extremely straightforward way which is merely following i finished reading this ebook where basically changed me, alter the way in my opinion.*

## LIGHT-ION CHARGE-EXCHANGE APPLIED TO STELLAR ELECTRON-CAPTURE STUDIES

[DOWNLOAD](#)

LAP Lambert Acad. Publ. Jun 2010, 2010. Taschenbuch. Book Condition: Neu. 220x150x10 mm. This item is printed on demand - Print on Demand Neuware - Despite 80 years of research, the mechanism of core-collapse supernova explosions and the precise nucleosynthesis of supernovae in general, still hold significant and exciting mysteries for the field of nuclear-astrophysics. What is the central ignition density for the white-dwarf model of the Type Ia supernova What is the energy spectrum of neutrinos trapped during the collapse and post-bounce evolution of a massive core-collapse supernova How can simulation reproduce the observed light curves and atomic spectra of these events Are the explosion mechanisms robust or chaotic phenomena It appears certain now that the answers to such questions will require a subtle but precise mixture of a wide variety of physics: relativistic transport (radiation, multi-flavored neutrino, and matter), three dimensional effects, and the computational and theoretical power to couple them all to the relevant particle and nuclear reaction networks. This monograph makes a small but important contribution toward this last item, specifically the determination of electron-capture reaction rates on nuclei, reactions which play differing but pivotal roles in all types of supernovae. 160 pp. Englisch.
